

■ PAID FEATURE · COMMUNITY

Community: groups, posts, engagement, and safe moderation.

Client-facing feature page explaining exactly what users can do inside Community: create or request groups, join approved spaces, publish posts with text, images, video, and documents, comment, reply, share, report, and keep the experience governed by coordinators.

PRIMARY USERS

Students · Community Coordinators · Third-Party Coordinators

ADMIN OWNER

Community Coordinator / University Super Admin

COMMERCIAL MODEL

Standalone paid module

■ FEATURE OVERVIEW

A university-owned social layer for campus groups.

Community gives the university a governed place for students, staff, and third-party partners to discover groups, join discussions, share useful content, and build belonging without moving conversations to unmanaged public channels.

What the client gets

When Community is Active, the app unlocks Feed, Explore, My Community, community profiles, community creation, pending request review, post creation, likes, comments, replies, sharing, report handling, and notifications. When inactive, those surfaces are hidden from students and staff.

3

Core sections: Feed, Explore, My Community

4

Post formats: text, image, video, document

2

Creation paths: instant staff create or user request

1

Moderated campus-owned community space

Sales story: Community helps the university sell belonging. Students do not just receive announcements; they join real groups, ask questions, post media, reply to peers, and build a campus network inside Intoto.

■ WHAT USERS CAN DO

Every visible action in the Community feature.

DISCOVER

CREATE

Explore approved communities

Users browse available university communities, open community profiles, read descriptions and rules, view member counts, and join relevant groups.

Create or request a community

Coordinators and Super Admins can publish communities instantly. Students and Third-Party Coordinators submit requests that wait for approval.

POST

Publish content in joined groups

Members can create text posts, image posts, video posts, document posts, and event-style share cards inside active communities.

ENGAGE

Like, comment, and reply

Users like posts, open like lists, comment, like comments, reply to comments, like replies, and continue discussions inside the community thread.

SHARE

Share posts and community content

Content can be shared to eligible community or chat contexts where sharing is available, helping useful posts travel without losing source context.

PROTECT

Report and moderate content

Users can report posts from the three-dot menu. Coordinators review reports, remove inappropriate content, and keep community standards clear.

Detailed functionality map

AREA	DETAILED FUNCTIONALITY	WHAT THE CLIENT CAN EXPLAIN
Community profile	Community name, description, rules, members/followers, posts, creator/admin context, and join state.	Every community has a clear home page, not only a feed item.
Join flow	Users discover approved communities, review details, and join so the group's	Students control which conversations they follow.

AREA	DETAILED FUNCTIONALITY	WHAT THE CLIENT CAN EXPLAIN
	posts appear in their Feed.	
Staff creation	Community Coordinators and University Super Admins create official groups that publish immediately.	Official university spaces can be launched quickly for intake, clubs, cohorts, or services.
User request	Students and Third-Party Coordinators submit name, topic, description, audience, and purpose for approval.	Student-led communities are encouraged but governed.
Post creation	Members post text, single image, multiple images, video, document attachments, and shared event cards where enabled.	The community is media-rich enough for real campus communication.
Comment threads	Users comment on posts, reply to comments, like comments, like replies, and keep discussions connected to the original post.	Discussion is structured, not scattered across separate messages.
Sharing	Users share posts to eligible chat or community destinations where the app allows sharing.	Useful content can travel while preserving its source context.
Reporting	Users report inappropriate posts through the post menu with the reason/context captured for review.	Students get a safety mechanism, and staff get a moderation queue.
Moderation	Coordinators review reports, remove content, reject community requests, archive communities, or follow up with creators.	The university owns standards and can keep the community healthy.

■ ANIMATED EXPLANATION

How Community works from request to engagement.

PLAY STORY

USER

ADMIN

UNIVERSITY

DECISION

CURRENT ACTOR

Student or Third-Party Coordinator

A user-facing action in the product experience.

USER ACTION · 1 OF 9

Submit community request

A non-staff user proposes a new community from My Community.

Outcome: A pending community request is created and routed to the coordinator/admin queue.

INFORMATION TAKEN

Community name, topic/category, description, audience, rules, and reason for creating the group.

HOW IT IS REVIEWED

The request is checked for duplication, relevance to campus life, policy fit, and safety risk.

DECISION / RESULT

A pending community request is created and routed to the coordinator/admin queue.

Community creation and approval flow

CURRENT ACTOR

Community member

A user-facing action in the product experience.

USER ACTION · 1 OF 7

Text, image, video, or document

Members publish useful content inside joined communities.

Outcome: The post is published in the community feed with media or document preview.

INFORMATION TAKEN

Post text, selected community, optional image, video, document, or shared event card.

HOW IT IS REVIEWED

App checks the user is a member of an Active community and has attached supported content.

DECISION / RESULT

The post is published in the community feed with media or document preview.

Post, media, comments, replies, and moderation flow

■ GOVERNANCE

Clear ownership keeps community safe.

ROLE	RESPONSIBILITY	IMPORTANT BOUNDARY
Student	Join communities, request new communities, post, like, comment, reply, share, report.	Student-created communities require approval before becoming visible.
Third-Party Coordinator	Request communities, join relevant groups, post and engage, receive suggestions.	Creation requests follow the same approval path as students.
Community Coordinator	Create official communities, approve/reject requests, moderate content, review reports, delete/archive where needed.	Owns day-to-day safety and engagement health.
University Super Admin	University-wide oversight, official creation, request clearing, moderation authority.	Can supervise the full tenant experience.

● PRODUCT

Community combines social engagement with approval gates, so universities get student-led energy without losing control.

● QA FOCUS

Active module exposes Community surfaces; pending groups remain hidden; approved groups are joinable; post actions work only in active/joined communities.

● MARKETING

"A safe campus social network where students create belonging and staff keep it healthy."
